

Extended Continuity of Learning Final Report Including NWEA Scores

Teaching and Learning Services

Purpose:

ESSER funds as well as supporting grant funds were issued with the purpose of helping districts move through the COVID-19 Pandemic and providing additional support for student interventions post COVID.

Given that most of these funds were not subject to the rules of supplanting, Waterford has maximized those funds to increase supports while saving other sources of funding, such as 31a. This will allow us to continue to provide supports through the unused funding beyond the expiration of ESSER funds.

This additional funding has helped to support teaching and learning by:

- supporting the implementation of extended day learning at all levels.
- supporting the enhancement and extension of summer programming at all levels.
- purchasing, providing professional learning and implementing new math programs at all levels.
- purchasing, providing professional learning and implementing new literacy programs at all levels.
- purchasing, providing professional learning and implementing support platforms such as Lexia, Amira, Lexia PowerUp and Dreambox K-8.
- purchasing, providing professional learning and implementing new science materials at all levels.
- purchasing, providing professional learning and expanding our social studies programs.
- training in, and implementation of, problem based learning.
- supporting the 1 to 1 initiative through purchase of additional Chromebooks.
- participating in equity work.

The conditional growth percentile, or CGP, is a district's/school's/student's percentile rank for growth using comparison groups across the nation. Students are similar with regard to starting achievement level, grade, subject area, and number of instructional weeks between test events. A student who demonstrated growth equivalent to that of similar students (that is, equal to the student growth norms) will have a CGP of 50. Growth greater than the norm would result in a percentile rank higher than the 50th percentile, and growth less than the norm would result in a percentile rank lower than the 50th percentile. CGPs range from the 1st to 99th percentile.

Dreambox Impact as of February 29, 2024

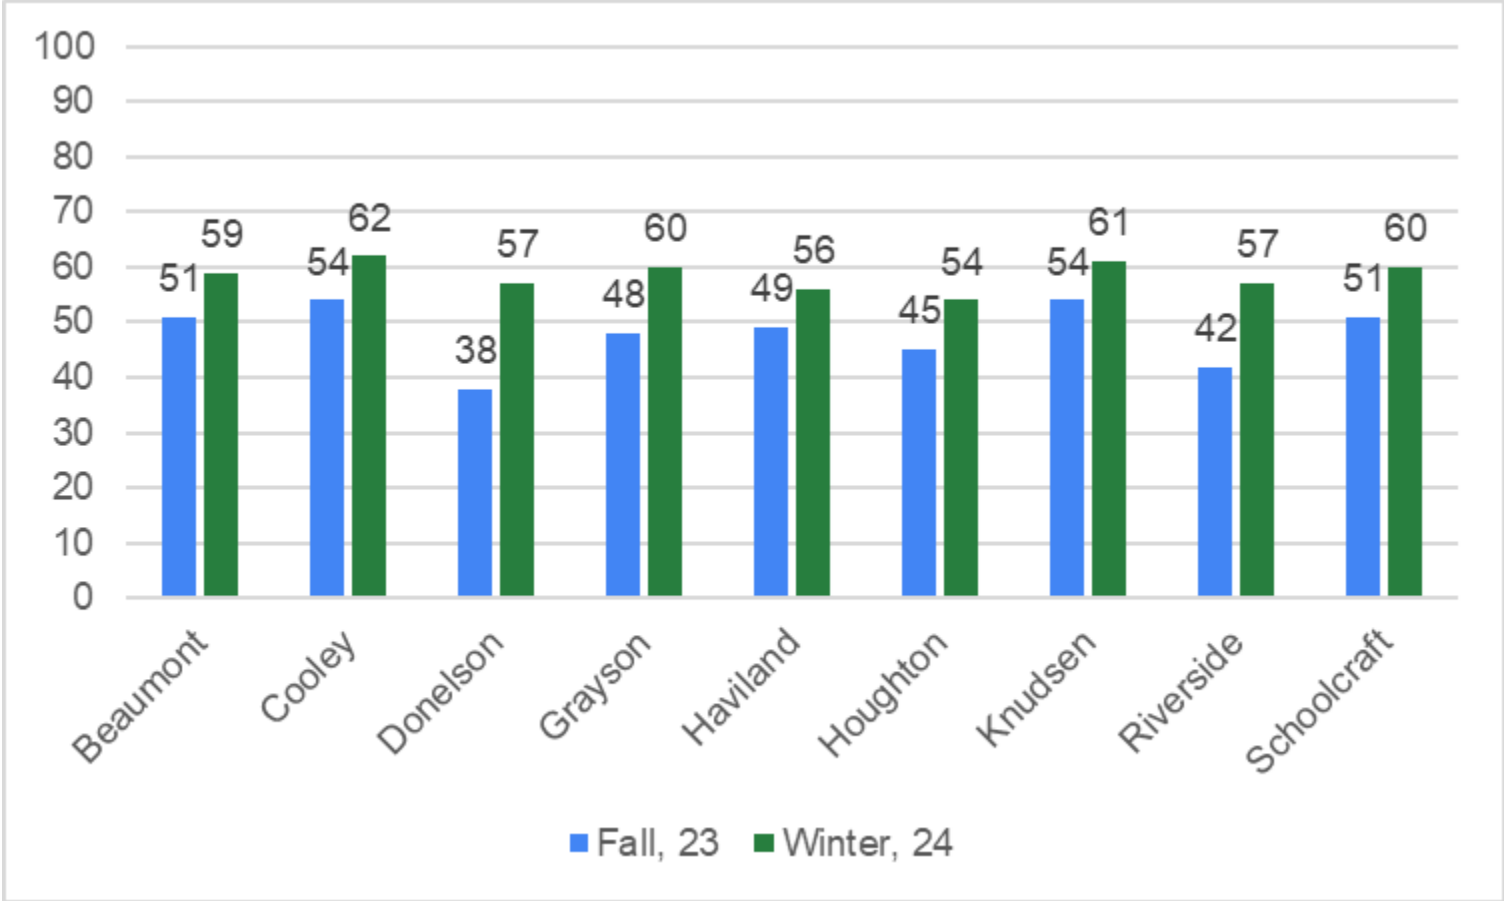

School	Overall Growth in Grade Levels
Beaumont	1
Cooley	1.1
Donelson	0.9
Grayson	0.8
Haviland	0.8
Houghton	0.9
Knudsen	0.8
Mason	0.6
Pierce	0.6
Riverside	0.8
Schoolcraft	0.9
District	0.84

In order to determine student median achievement scores, schools are compared across the nation to determine how well students did in achievement against the norm. Each student is assigned a percentile. Those percentiles are ranked highest to lowest, and the median is the middle score. This was done in fall and again in winter to determine the change in median percentile, indicating that scores increased as the median increased. The following information is new from NWEA and gives us a better gauge of student achievement.

Median Achievement Percentiles

Median Reading Achievement Percentile by School

Median Reading Achievement Percentile by School

Median Language Usage Percentile by School

Quadrant Charts

Quadrant data ranks schools/students by growth as compared to achievement. The following data plots growth and achievement from Fall, 2023 to Winter, 2024. The four quadrants signify the amount of growth and achievement for each school in that time period.

NWEA Reading Fall 2023 - Winter 2024

NWEA Math Fall 2023 - Winter 2024

How do we know that the initiatives financed through ESSER funds are having an impact?

- At the onset of COVID, we determined that NWEA would be our benchmark assessment.
- The NWEA scores demonstrate that we have made consistent progress and are meeting our goal of increasing our conditional growth percentile.
- Students who have been engaged with the new curriculum for longer periods have shown more growth and achievement.
- Students who have been engaged with the platforms longer have shown stronger growth and achievement.
